CAP CABLING ACCESS POINT

by: HEPACART

CAP is a productivity tool that saves time and money when pulling cable in a lift-out ceiling.

- The CAP access point helps feed wire and cable into the ceiling making it easier to pull.
- Steel rollers on the backside decrease friction and improve wire-flow thus protecting the cable.

The CAP user will spend less time pulling cable and be confident that it is free from nicks or scrapes.

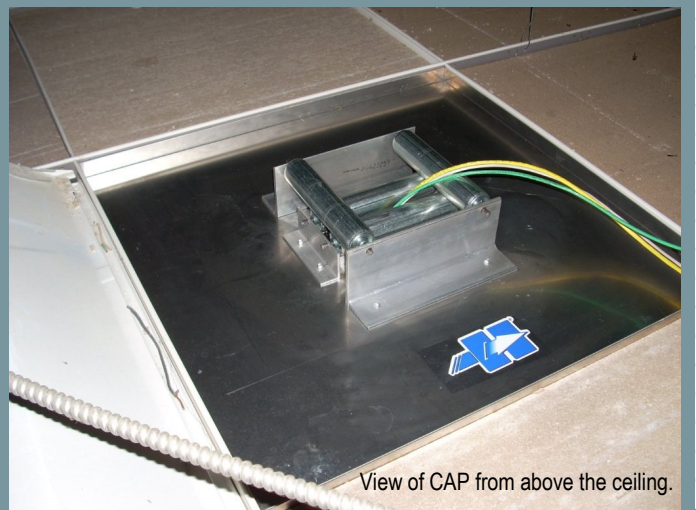

- The opening is protected by a horsehair bristles which keep dust, dirt and debris from falling out of the ceiling.
- The CAP is durable, easily portable and weighs just 8 lbs.

Products Protect Patients and Productivity!

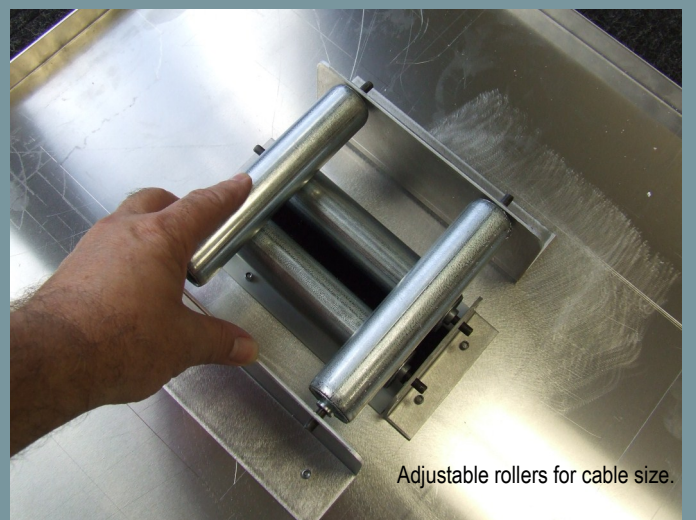

View of CAP From below.

View of CAP from above the ceiling.

Horsehair bristles keep contaminants from entering the clean space.

Adjustable rollers for cable size.
