

HEPACART™

www.hepacart.com

Hospital Facilities & Healthcare Contractors

HEPACART's **protect patients** by collecting dust and associated pathogens thereby **reducing the risk of hospital affiliated infections.**

- The HEPACART is the only containment system with an embedded Negative Air Machine that is **independently inspected and certified by a third party.**
- All HEPACART filters are **certified at an Air Cleanliness Level of 99.97% or .3 microns. ISO Class 5.**

HEPACART's **save time and money!** They are quick to set up, easy to move and require **no assembly.**

- The HEPACART pays for itself in 29 project man-hours. **In less than a week's use, your HEPACART will begin saving money.**
- **One person can easily maneuver the HEPACART** in a work-site with swivel lock, non-marring casters that protect floors. Wheels are rated for 900 lbs.
- When the HEPACART is ready to move, just drop the curtain a few inches and move to the next site. It is a two-minute move.
- Tools, ladder and other **work materials can conveniently remain in the HEPACART** while moving between work-points.

HEPACART's are durable. **The first generation HEPACARTs made in 2007 are used routinely in hospitals today.**

- HEPACART's stainless aluminum skin is **easily cleaned and resists tears and punctures** by normal tool and ladder usage.
- **100% made in the USA.** Engineered and constructed by healthcare contractors for healthcare contractors.

Standard dust/debris pre-filter protects HEPA filter. 750 CFM variable speed fan. Optional toolbox shelf.

Laptop Shelf Option

Compliance Certification

Specifications

Dimensions: L: 74" H: 74" W:29" (L: 80" w/handles)
HEPACART is shorter and narrower than a hospital bed.

Productivity: Approximately 2 minutes for take-down and setup to move from work point to work point.

Investment: The initial difference between HEPACART and other clean ceiling access options is paid for in the first 29 hours of use. After 29 hours the HEPACART is saving money.
