Reusable Temporary Wall Containment

Eliminates the disruption of renovation

S Y S T E M S

What Our Customers are Saying

“The best compliment we can get is that they don’t realize there’s renovation work going on. People think it’s just part of the building. That’s important in health care.”

DUSTIN CLEMENT

Superintendent
Suffolk Construction @ Brigham and Women’s Hospital

“We weighed the cost effectiveness; the investment vs. an expense. But we have found STARC Systems provides a rapid payback schedule. Our investment is paid back within three uses.”

CHIP BOWMAN

Executive Director of Development & Finance
W.E. Bowman Construction

“We set up the STARC walls and you couldn’t hear the construction. And it kept all the dust out. People didn’t even know it was a construction area.”

JOHN NOONE

Vice President of Field Operations
J. Calnan & Associates

“The prefabricated modular panels took a mere two hours to be installed. I don’t think I have ever solved a construction issue so easily.”

RON VACHON

Director of Plant Operations
St. Mary’s Regional Medical Center

“It minimizes risk to patients because it is so easy to set up correctly while maintaining an airtight seal around the project. “This is the best solution I have seen for keeping the patient population protected from noise, dust and any other potentially hazardous materials during renovations in a hospital environment.”

DANIELA SKALINA

Infection Control Director
Central Maine Medical Center

“A lot of these new projects have spring boarded from having the STARC Containment System in our arsenal. As we’ve built and strengthened our relationships with healthcare facility directors, they’ve seen the ease of use and effectiveness of the STARC System, and it has opened doors to other projects.”

ANGELO FERRANTE

President
Hudson Valley Contracting

appearance**

STARC Systems Benefits

SOUND ATTENUATING

Sound attenuating foam core reduces renovation noise by up to 50%.

REAL WALL APPEARANCE

Looks great. Construction is hidden behind what looks like a real wall.

SUPERIOR DURABILITY

Resists dents and scratches. Reusable and backed by a 3 year warranty.

ICRA IV

Exceeds ICRA Class IV requirements when installed properly.

CLASS A FIRE & SMOKE RATED

Panels tested and listed for ASTM E-84 Class A performance for smoke and fire.

REUSABLE & WASTE REDUCING

Durable walls can be reused and reconfigured for years. Reduces waste.

EASILY DISINFECTED

Cleans easily with water and solvent-based cleaners and disinfectants.

FAST INSTALLATION

100' feet of wall can be installed in an hour, saving time and money between phases.

COST SAVINGS

Pays for itself in 3-5 uses. Reduce labor costs and minimize future containment purchases.

Our Services

BUY

Best cost savings over time

Pays for itself in 3-5 uses

Reusable and reconfigurable

RENT

Lower up-front cost

No storage requirements

Ideal for project-based jobs

RENT TO OWN

Lower up-front cost

Keep the system after project

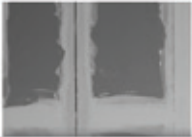

Qualify for discount toward purchase

Containment 101

Renovation and construction projects often begin with containment of the area. Healthcare practitioners, general contractors, and facility staff need to be confident in temporary wall containment systems that provide sound attenuation, eliminates the introduction of dust and pathogens, can be easily installed and dismantled and allows for operations to continue without disruption.

Furthermore, healthcare and life science facilities, exceeding ICRA Class IV requirements is of paramount importance.

There are many different options in the containment/barrier management space. Choosing the right solution for your project requires a good understanding of the options. What is the most effective?

PANELS

Eliminates the disruption of renovations

The STARC System is patented (patent #US 10,041,249 B1) and the most innovative on the market. Our flagship telescoping (6'-10" - 10'-3") modular wall panels feature a three-layer construction with our lightweight aluminum front, sound attenuating foam core and galvanized steel back. STARC panels are the most stable and durable on the market. With the simple, airtight panel connection and gasketing, our wall system can exceed ICRA Class IV requirements and is Class A rated for fire and smoke.

Multiple widths that offer unlimited configuration options.

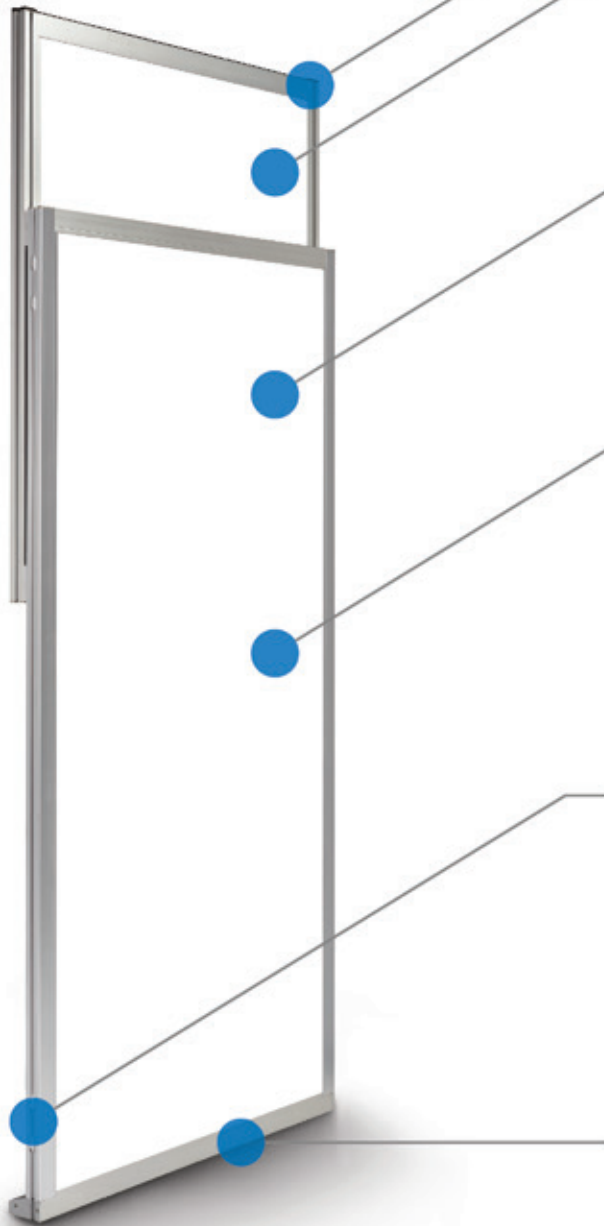

Performance Specs

- Interior non-load bearing applications only
- Humidity: Up to 90% RH non-condensing
- Max pressure differential: .25" w.c.
- Max floor pitch: 1/8" per foot
- Max floor roughness < 1/8" variance
- Chemical compatibility: May be cleaned or disinfected with all common water and solvent based cleaners & disinfectants
- Tested and listed for ASTM E-84 Class A performance for flame spread and smoke generation

Panel Front

The panel front is built to be airtight, durable, and provide a real wall appearance.

Top Gasket

Made of durable closed cell foam that provides an airtight seal and is easily cleaned and replaced

Adjustable Height

Extends from 6' 10" to 10' 3"

Lightweight Aluminum Front

Bright white glossy surface is easily disinfected and looks like a real wall

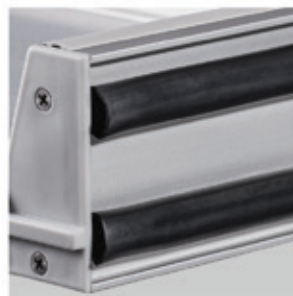

Urethane Foam Core

Eliminates up to 50% of renovation noise

Dual Slots & Flanged Stud

Lift and drop connection system allow 100' of wall to be installed in one hour with no external brackets

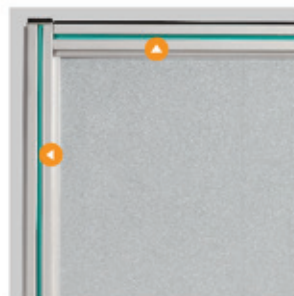

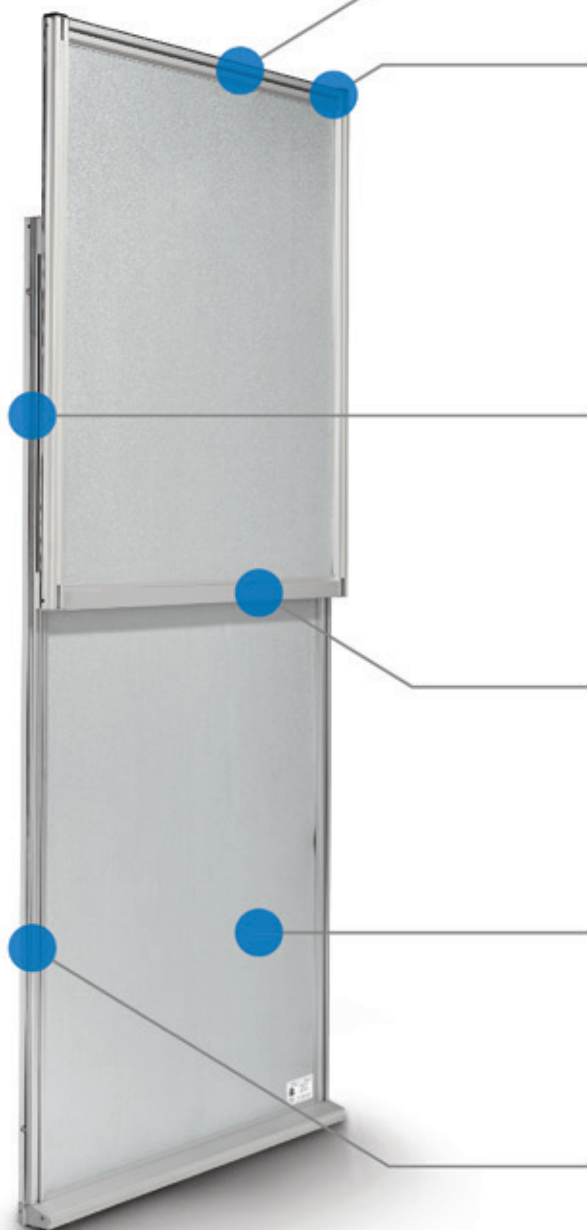

Bottom Gasket

Constructed from rubber that provides superior grip, an airtight seal and is easily cleaned and replaced

Panel Back

The panel back is designed to provide superior adjustability.

360° T-Slot Attachment System

Adds stability and provides unlimited attachment options for brackets, anchors and bracing

Ceiling Grid Attachment Options

Standard clips available for standard, flush, recessed and concealed grid tiles

Vertical Spline Gaskets

Reduces air leakage between adjacent panels

Concealed Height Locks

Dual locks provide secure smooth adjustment and load bearing for the upper panel. Integrated lower limit safety stops

Galvanized Steel Back

Rugged surface that provides a secure safety barrier

Anodized Aluminum Frame

Rugged and durable and has integrated airtight seal elements

Improves patient satisfaction

Our disruption-free installation process and sound attenuating panels reduce renovation noise by up to 50%. Modular, air-tight panels exceed Class IV ICRA requirements when installed properly and protect patients and staff from construction dust as well

as infectious pathogens. Our white high-gloss painted aluminum panels and dust containment system have a professional real wall appearance and can be easily cleaned and sanitized with standard antimicrobial disinfectants.

NEGATIVE AIR PANELS

Adjustable Height

Extends from 6' 10" to 10' 3"

Multiple Widths

Panels available in 18", 24", 32", and 42"

Lightweight Aluminum Front

Bright white glossy surface is easily disinfected and looks like a real wall

Anodized Aluminum Frame

Rugged and durable and has integrated airtight seal elements

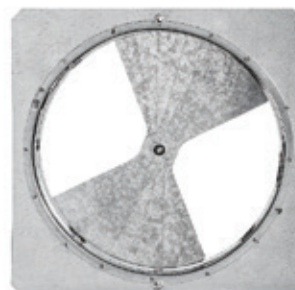

Supports Optional Pressure Monitor

Comes ready to integrate a differential pressure monitor and accommodates all common data recorders

Integrated Pressure Ports

One on each side of the panel

Standard Duct Collar

All panels come with a standard 12" duct collar with integrated adjustable shutter

A negative pressure environment will help contain renovation dust, pathogens and odors within the containment area—a requirement in critical spaces like healthcare and lab settings.

Our ventilated panels can easily integrate with exhaust registers, pressure monitor ports and all common data recorders. These panels exceed ICRA Class IV requirements.

Performance Specs

- Panels extend from 6' 10" to 10' 3" with option for tempered glass on the top
- Standard 12" diameter duct collar with integral shutter
- Integrated air pressure ports on each side
- Configured to integrate optional Abatement digital monitor
- Supports all common data recorders
- Internal passage for power cords from front to back

DOORS

The most durable doors on the market

Swing in, swing out, hinge left or right, or just slide—our doors are modular, extremely durable and designed to withstand years of use. An adjustable threshold/sweep gasket solves for uneven floors; and, rubber gaskets and seals keeps the dust and debris contained. The industry's only self closing sliding door is perfect for containment projects where a hinged door just won't work.

Multiple lock options for varying levels of security.

Performance Specs

- Class 2 hardware
- Self-closing sliding door
- Dead latch set & ICU latch standard on sliding door with electronic lock option
- Top or bottom tempered glass options
- Adjustable threshold & sweep gasket allows for installation of doors on uneven surfaces
- Robust track hardware for added durability

Hinged Door

Our hinged door is engineered to be the most durable on the market.

Modular "Over the Door" Kit

Provides an airtight, flexible height panel that seals to ceiling heights up to 10' 3"

Multiple Widths

Both sliding and hinged doors available in 42" and 54"

Lightweight Aluminum Front

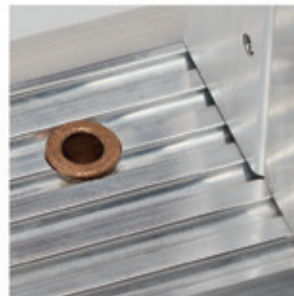

Bright white glossy surface is easily disinfected and looks like a real wall

Anodized Aluminum Frame

Both doors are rugged and durable and have integrated airtight seal elements

Handle Set

Standard class 2 handle set available with an interchangeable core option

Superior Hinge System

Allows for in/out or left/right adjustability, which is quickly and easily modified once installed

Threshold & Sweep

Adjustable threshold and sweep gasketing allows for installation of doors on uneven surfaces

Sliding Door

Our rugged sliding door is the only self-closing door on the market.

Modular "Over the Door" Kit

Provides an airtight, flexible height panel that seals to ceiling heights up to 10' 3"

Self Closing Slider

The first and only self closing sliding door on the market

Multiple Widths

Both sliding and hinged doors available in 42" and 54"

Lightweight Aluminum Front

Bright white glossy surface is easily disinfected and looks like a real wall

Anodized Aluminum Frame

Both doors are rugged and durable and have integrated airtight seal elements

Threshold & Sweep

Adjustable threshold and sweep gasketing allows for installation of doors on uneven surfaces
